Text Direction and align in CSS

Overview

The direction property specifies the **text direction/writing direction** within a block-level element.
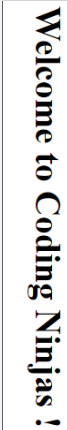

writing modes

A writing mode in CSS refers to whether the text is running horizontally or vertically. The writing-mode property allows us to switch from one writing mode to another. You can change the writing mode of parts of your layout for creative purposes.

Writing mode	Direction
vertical-rl	Text displays vertically
horizontal-lr	Text displays horizontally

HTML :   `<h1> Welcome to Coding Ninjas ! </h1>`

CSS :   h1{

      writing-mode : vertical-rl ;

}

Browser :

Welcome to Coding Ninjas !

Text align

The text-align property is used to set the **horizontal alignment of a text.**
A text can be aligned left, right, centred, or justified.

HTML :   `<p id="center"> center </p>`
`<p id="left"> left </p>`
`<p id="right"> right </p>`

CSS :   ```
#center {
        text-align: center;
 }
#left {
        text-align: left;
}
#right {
         text-align: right;
}
```

| center |
|:------:|
| left |
| right |
